F7B3X Series User Manual

The user manual is suitable for the following model:

Model	Product Type
F7B30	GPS+TD-SCDMA/TD-SCDMA ROUTER
F7B31	GPS+EVDO/EVDO ROUTER
F7B32	GPS+WCDMA/WCDMA ROUTER
F7B33	GPS+WCDMA/EVDO ROUTER
F7B34	GPS+EVDO/TD-SCDMA ROUTER

Chapter 1 Brief Introduction of Product

1.1 General

F7B3X series ROUTER is a kind of cellular terminal device that provides data transfer function by public cellular network. Also, it supports double link backup, Load Balancer, Load Shunt and GPS function

It adopts high-powered industrial 32-bits CPU and embedded real time operating system. It supports RS232 (or RS485/RS422), Ethernet port that can conveniently and transparently connect one device to a cellular network, allowing you to connect to your existing serial, Ethernet devices with only basic configuration.

It has been widely used on M2M fields, such as intelligent transportation, smart grid, industrial automation, telemetry, finance, POS, water supply, environment protection, post, weather, and so on.

1.2 Features and Benefits

Design for Industrial Application

- ◆ High-powered industrial cellular module
- ◆ High-powered industrial 32bits CPU
- ◆ High-powered industrial GPS module
- ◆ Support low-consumption mode, including sleep mode, scheduled online/offline mode, scheduled power-on/power-off mode(optional)
- ◆ Housing: iron, providing IP30 protection.
- ◆ Power range: DC 5~35V

Stability and Reliability

- ◆ Support hardware and software WDT
- ◆ Support auto recovery mechanism, including online detect, auto redial when offline to make router always online
- ◆ Ethernet port: 1.5KV magnetic isolation protection
- ◆ RS232/RS485/RS422 port: 15KV ESD protection
- ◆ SIM/UIM port: 15KV ESD protection
- ◆ Power port: reverse-voltage and overvoltage protection

Xiamen Four-Faith Communication Technology Co.,Ltd.

Page 7 of 81

Add: J1-J3,3rdFloor,No.44,GuanRiRoad,SoftWare Park,XiaMen .361008.China

http: //www.fourfaith.com Tel: +86 592-6300326 6300325 6300324 Fax: +86 592-5912735

- ◆ Antenna port: lightning protection(optional)

Standard and Convenience

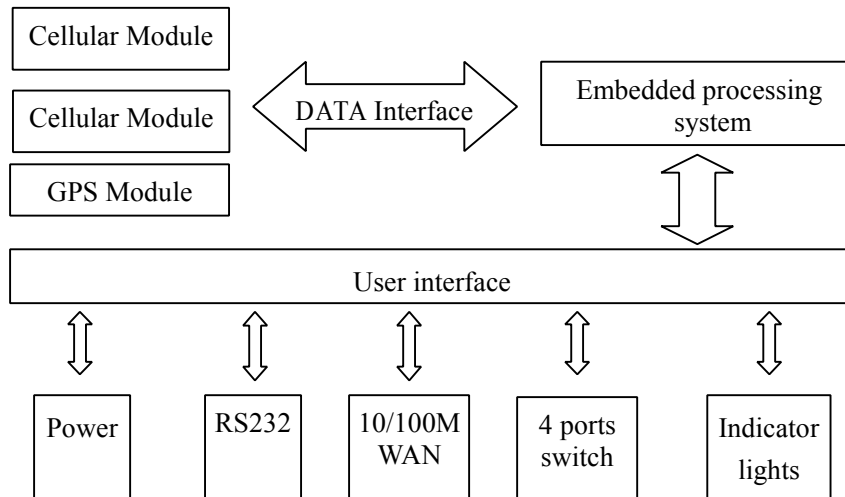

- ◆ Support standard RS232(or RS485/RS422), Ethernet port that can connect to serial, Ethernet devices directly
- ◆ Support standard WAN port and PPPOE protocol that can connect to ADSL directly
- ◆ Support intellectual mode, enter into communication state automatically when powered
- ◆ Provide management software for remote management
- ◆ Support several work modes
- ◆ Convenient configuration and maintenance interface (WEB or CLI)

High-performance

- ◆ Support multiple WAN access methods, including static ip, DHCP, L2TP, PPTP,PPPOE,3G/HSPA/4G
- ◆ Support double link backup between 3G/4G and WAN(PPPOE, ADSL) (optional)
- ◆ Support Load Balancer and Load Shunt
- ◆ Support VPN client(PPTP, L2TP, OPENVPN, IPSEC and GRE)(only for VPN version)
- ◆ Support VPN server(PPTP, L2TP, OPENVPN, IPSEC and GRE)(only for VPN version)
- ◆ Support local and remote firmware upgrade,import and export configure file
- ◆ Support NTP, RTC embedded
- ◆ Support multiple DDNS provider service
- ◆ Support VLANs, MAC Address clone, PPPoE Server
- ◆ Support multi online trigger ways, including SMS, ring and data. Support link disconnection when timeout
- ◆ Support APN/VPDN
- ◆ Support DHCP server and client, firewall, NAT, DMZ host , URL block, QoS, ttraff,statistics, real time link speed statistics etc
- ◆ Full protocol support , such as TCP/IP, UDP, ICMP, SMTP, HTTP, POP3, OICQ, TELNET, FTP, SNMP, SSHD, etc
- ◆ Schedule Reboot, Schedule Online and Offline,etc
- ◆ Support GPS function

1.3 Working Principle

The principle chart of the router is as following:

1.4 Specifications

Cellular Specification

Standard and Band	Bandwidth	TX power	RX sensitivity
F7B30 GPS+TD-SCDMA/TD-SCDMA ROUTER			
TD-SCDMA/HSDPA/HSUPA 1880-1920/2010-2025MHz GSM850/900/1800/1900MHz GPRS/EDGE CLASS 12	Download speed:2.8Mbps, upload speed:2.2Mbps;	<24dBm	<-108dBm
F7B31 GPS+EVDO/EVDO ROUTER			
800MHz,800/1900MHz(optional) 450MHz (optional) EVDO Rev B 800/1900MHz(optional) CDMA2000 1X RTT, IS-95 A/B	Download speed:3.1Mbps upload speed:1.8Mbps EVDO Rev B(optional) Download speed:14.7Mbps upload speed:5.4Mbps	<23dBm	<-104 dBm
F7B32 GPS+WCDMA/WCDMA ROUTER			
UMTS/WCDMA/HSDPA/HSUPA /HSPA+ 850/1900/2100MHz 850/900/1900/2100MHz(optional) GSM850/900/1800/1900MHz	HSUPA:5.76Mbps (Upload speed) HSDPA:7.2Mbps (Download speed)	<24dBm	<-109 dBm

GPRS/EDGE CLASS 12	UMTS:384Kbps (DL/UL) HSPA+:21 Mbps(Download speed) 5.76Mbps (Upload speed)		
F7B33 GPS+WCDMA/EVDO ROUTER			
WCDMA: UMTS/WCDMA/HSDPA/HSUPA /HSPA+ 850/1900/2100MHz 850/900/1900/2100MHz(optional) GSM850/900/1800/1900MHz GPRS/EDGE CLASS 12	HSUPA:5.76Mbps (Upload speed) HSDPA:7.2Mbps (Download speed) UMTS:384Kbps (DL/UL) HSPA+:21 Mbps(Download speed) 5.76Mbps (Upload speed)	<24dBm	<-109 dBm
EVDO: 800MHz,800/1900MHz(optional) 450MHz (optional) EVDO Rev B 800/1900MHz(optional) CDMA2000 1X RTT, IS-95 A/B	Download speed:3.1Mbps upload speed:1.8Mbps EVDO Rev B(optional) Download speed:14.7Mbps upload speed:5.4Mbps	<23dBm	<-104 dBm
F7B34 GPS+EVDO/TD-SCDMA ROUTER			
EVDO: 800MHz,800/1900MHz(optional) 450MHz (optional) EVDO Rev B 800/1900MHz(optional) CDMA2000 1X RTT, IS-95 A/B	Download speed:3.1Mbps upload speed:1.8Mbps EVDO Rev B(optional) Download speed:14.7Mbps upload speed:5.4Mbps	<23dBm	<-104 dBm
TD-SCDMA: TD-SCDMA/HSDPA/HSUPA 1880-1920/2010-2025MHz GSM850/900/1800/1900MHz GPRS/EDGE CLASS 12	Download speed:2.8Mbps, upload speed:2.2Mbps;	<24dBm	<-108dBm

GPS Specification

Item	Content
GPS Module	Industrial GPS module
Receiver Type	50-channle GPS L1 (1575.42MHz) C/A code SBAS: WAAS,EGNOS,MSAS,GAGAN Support GALILEO
Max. update rate	4 Hz
Accuracy	Position: 2.5m CPE SBAS: 2.0m CPE
Acquisition	Cold starts: 29S

	Warm starts: 29S Aided starts: <1S Hot starts: <1S
Sensitivity	Tracking: -160dBm Reacquisition: -160dBm Cold starts: -144dBm
Timing accuracy	RMS: 30ns 99%: <60ns Granularity: 21ns
Time pulse	Configurable, 0.25 to 1000Hz

Hardware System

Item	Content
CPU	Industrial 32bits CPU
FLASH	8MB(Extendable to 64MB)
SDRAM	64MB

Interface Type

Item	Content
WAN	1 10/100 Mbps WAN port(RJ45), auto MDI/MDIX, 1.5KV magnetic isolation protection
LAN	4 10/100 Mbps Ethernet ports(RJ45), auto MDI/MDIX, 1.5KV magnetic isolation protection
Serial	1 RS232(or RS485/RS422) port, 15KV ESD protection Data bits: 5, 6, 7, 8 Stop bits: 1, 1.5(optional), 2 Parity: none, even, odd, space(optional), mark(optional) Baud rate: 2400~115200 bps
Indicator	"Power", "System", "Online-1", "Online-2", "Local Network", "WAN", "GPS", "Signal Strength"
Antenna	Cellular: 2 standard SMA female interfaces, 50 ohm, lightning protection(optional) GPS: standard SMA female interfaces, 50 ohm, lightning protection(optional)
SIM/UIM	Standard 3V/1.8V user card interface, 15KV ESD protection
Power	Standard 3-PIN power jack, reverse-voltage and overvoltage protection
Reset	Restore the router to its original factory default settings

Power Input

Item	Content
Standard Power	DC 12V/1.5A
Power Range	DC 5~35V

Consumption	<650mA (12V)
-------------	--------------

Physical Characteristics

Item	Content
Housing	Iron, providing IP30 protection
Dimensions	206x135x28 mm
Weight	805g

Environmental Limits

Item	Content
Operating Temperature	-35~+75°C (-31~+167°F)
Storage Temperature	-40~+85°C (-40~+185°F)
Operating Humidity	95% (Non-condensing)

Chapter 2 Installation Introduction

2.1 General

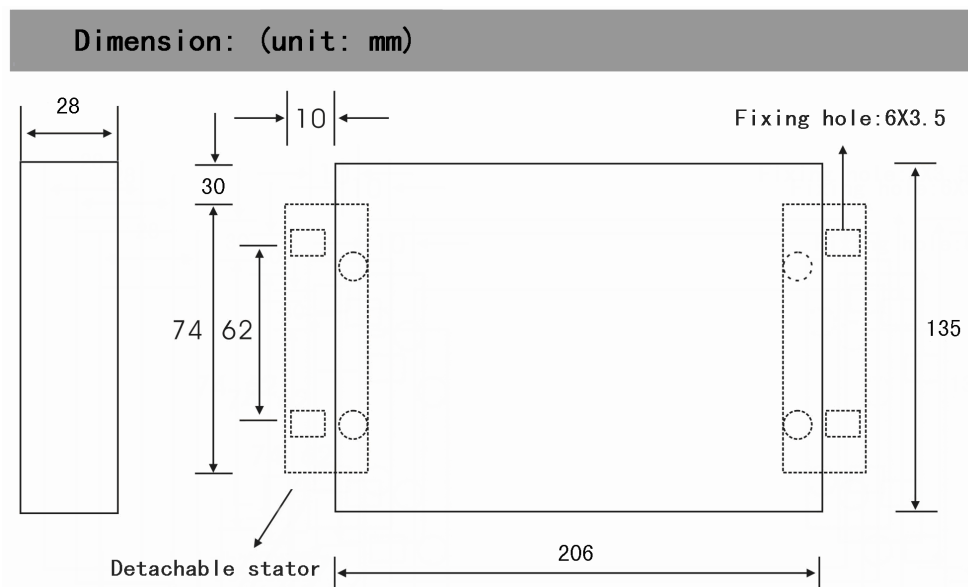

The router must be installed correctly to make it work properly.

Warning: Forbid to install the router when powered!

2.2 Encasement List

Name	Quantity	Remark
Router host	1	
Cellular antenna (Male SMA)	2	
GPS antenna (Male SMA)	1	
Network cable	1	
Console cable	1	optional
Power adapter	1	
Manual CD	1	
Certification card	1	
Maintenance card	1	

2.3 Installation and Cable Connection

Installation of SIM/UIM card:

SIM/UIM-1: For the main link

SIM/UIM-2: For the backup link

Model	SIM/UIM Type
F7B30 GPS+TD-SCDMA/TD-SCDMA ROUTER	SIM/UIM-1: TD-SCDMA (main link) SIM/UIM-2: TD-SCDMA (backup link)
F7B31 GPS+EVDO/EVDO ROUTER	SIM/UIM-1: EVDO(main link)) SIM/UIM-2: EVDO(backup link)
F7B32 GPS+WCDMA/WCDMA ROUTER	SIM/UIM-1: WCDMA(main link) SIM/UIM-2: WCDMA(backup link)
F7B33 GPS+WCDMA/EVDO ROUTER	SIM/UIM-1: EVDO(main link)) SIM/UIM-2: WCDMA(backup link))
F7B34 GPS+EVDO/TD-SCDMA ROUTER	SIM/UIM-1: EVDO (main link) SIM/UIM-2: TD-SCDMA (backup link)

Firstly power off the router, and press the out button of the SIM/UIM card outlet with a needle object. Then the SIM/UIM card sheath will flick out at once. Put SIM/UIM card into the card sheath (Pay attention to put the side which has metal point outside), and insert card sheath back to the SIM/UIM card outlet.

Warning: Forbid to install SIM/UIM card when powered!

Installation of antenna:

ANT-1: For the main link

ANT-2: For the backup link

Screw the SMA male pins of the two cellular antennas to the female SMA interfaces of the router with sign “ANT-1” and “ANT-2”.

Screw the SMA male pin of the GPS antenna to the female SMA interface of the router with sign “GPS”.

Warning: The cellular antenna and the GPS antenna can not be connected wrongly. And the antennas must be screwed tightly, or the signal quality of antenna will be influenced!

Installation of cable:

Insert one end of the network cable into the switch interface with sign “Local Network”, and insert the other end into the Ethernet interface of user’s device. The signal connection of network direct cable is as follows:

RJ45-1	RJ45-2
1	1
2	2
3	3
4	4
5	5
6	6
7	7
8	8

Insert the RJ45 end of the console cable into the RJ45 outlet with sign “console”, and insert the DB9F end of the console cable into the RS232 serial interface of user’s device.

The signal connection of the console cable is as follows:

RJ45	DB9F
1	8
2	6
3	2
4	1
5	5
6	3
7	4
8	7

The signal definition of the DB9F serial communication interface is as follows:

Pin	RS232 signal name	The direction for Router
1	DCD	output
2	RXD	output
3	TXD	input
4	DTR	input
5	GND	
6	DSR	output
7	RTS	input
8	CTS	output

2.4 Power

The power range of the router is DC 5~35V.

Warning: When we use other power, we should make sure that the power can supply power above 7W.

We recommend user to use the standard DC 12V/1.5A power.

2.5 Indicator Lights Introduction

The router provides following indicator lights: "Power", "System", "Online-1", "Online-2", "Local Network", "WAN", "GPS", “Signal Strength”.

Indicator	State	Introduction
-----------	-------	--------------

Light		
Power	ON	Router is powered on
	OFF	Router is powered off
System	BLINK	System works properly
	OFF	System does not work
Online-1	ON	The main link has logged on network
	OFF	The main link hasn't logged on network
Online-2	ON	The backup link has logged on network
	OFF	The backup link hasn't logged on network
Local Network	OFF	The corresponding interface of switch is not connected
	ON / BLINK	The corresponding interface of switch is connected /Communicating
WAN	OFF	The interface of WAN is not connected
	ON / BLINK	The interface of WAN is connected /Communicating
GPS	ON	GPS is active
	OFF	GPS is not active
Signal Strength	One Light ON	Signal strength is weak
	Two Lights ON	Signal strength is medium
	Three Lights ON	Signal strength is good

2.6 Reset Button Introduction

The router has a “Reset” button to restore it to its original factory default settings. When user press the “Reset” button for up to 15s, the router will restore to its original factory default settings and restart automatically.

Chapter 3 Configuration and Management

This chapter describes how to configure and manage the router.

3.1 Configuration Connection

Before configuration, you should connect the router and your configuration PC with the supplied network cable. Plug the cable's one end into the Local Network port of the router, and another end into your configure PC's Ethernet port. The connection diagram is as following:

Please modify the IP address of PC as the same network segment address of the router, for instance, 192.168.1.9. Modify the mask code of PC as 255.255.255.0 and set the default gateway of PC as the router's IP address (192.168.1.1).

3.2 Access the Configuration Web Page

The chapter is to present main functions of each page. Users visit page tool via web browser after connect users' PC to the router. There are eleven main pages: Setting, Wireless, Service, VPN, Security, Access Restrictions, NAT, QoS Setting, Applications, Management and Status. Users enable to browse slave pages by click one main page.

Users can open IE or other explorers and enter the router's default IP address of 192.168.1.1 on address bar, then press the bottom of Enter to visit page Web management tool of the router. The users login in the web page at the first name, there will display a page shows as blow to tip users to modify the default user name and password of the router. Users have to click "change password" to make it work if they modify user name and password.

Router Management

Your Router is currently not protected and uses an unsafe default username and password combination, please change it using the following dialog!

Router Password

Router Username

Router Password

Re-enter to confirm

Users need to input user name and password if it is their first time to login.

Input correct user name and password to visit relevant menu page. Default user name is root, password is admin. (available to modify user name and password on management page, then click submit)

3.3 Management and configuration

3.3.1 Setting

The Setup screen is the first screen users will see when accessing the router. Most users will be able to configure the router and get it work properly using only the settings on this screen. Some Internet Service Providers (ISPs) will require users to enter specific information, such as User Name, Password, IP Address, Default Gateway Address, or DNS IP Address. These information can be obtained from your ISP, if required.

3.3.1.1 Basic Setting

DUAL LINK OPTION

DUAL LINK OPTION

Enable WAN Failover ☒ Enable ☐ Disable

Dual Both Online ☒ Enable ☐ Disable

[Load Balancer](#)

Enable dual link option to enable dual both online router. Click disable means to enable only

single link (main link), and backup link does not enable to work. If clink enable, then there are configure options for dual both online:

Enable: All default data will be sent via main link to Internet when main link is online. If main link is offline and backup link is online, then it will switch to backup link, and default data will send via backup link to Internet network. Meanwhile, main link is trying to reconnect, the transfer will turn back to main link if it reconnect successful. In general, working mode come first, backup link is to backup.

Note: If both sim are online and enable load balancer and load shunt, detailed data movement please refer to the menu of load Arrange

Disable: only one link can work between main link and backup link. If main link is online, it uses main link. If main link is offline, it switches to backup link. If main link is online again, it will not switch to main link. Only backup link is offline can it switch to main link.

Note: when users enable dual link option, they need to configure relevant keep online function if connection type of main link and backup link is 'Static IP' or 'DHCP'. Detailed configuration refer to Keep Online section. Connection type of main link and backup link forbid to be the same, and not under the same Ethernet port. For example, main link is 'Static IP', 'DHCP', or 'PPPOE', backup link must be 3G Link 1 or 3G Link 2, otherwise the page will appear corresponding hint.

Connection Type

Seven Ways: Disabled, Static IP, Automatic Configuration-DHCP, PPPOE, 3G Link 1, 3G Link 2

Connection type	<input type="text" value="Auto"/>
-----------------	-----------------------------------

Connection type: Auto, Force 3G, Force 2G, Prefer 3G, Prefer 2G options. If using 4G module, there has 4G network option. Users select different mode depending on their need

Keep Online

Keep Online Detection	<input type="text" value="Ping"/>
Detection Interval	<input type="text" value="60"/> Sec.
Primary Detection Server IP	<input type="text" value="166"/> . <input type="text" value="111"/> . <input type="text" value="8"/> . <input type="text" value="238"/>
Backup Detection Server IP	<input type="text" value="202"/> . <input type="text" value="119"/> . <input type="text" value="32"/> . <input type="text" value="102"/>

This function is used to detect whether the Internet connection is active, if users set it and when the router detect the connection is inactive, it will redial to users' ISP immediately to make the connection active.

Detection Method:

None: do not set this function

Ping: Send ping packet to detect the connection, when choose this method, users should also configure "Detection Interval", "Primary Detection Server IP" and "Backup Detection Server IP" items.

Route: Detect connection with route method, when choose this method, users should also configure "Detection Interval", "Primary Detection Server IP" and "Backup Detection Server IP" items.

PPP: Detect connection with PPP method, when choose this method, users should also configure "Detection Interval" item.

Detection Interval: time interval between two detections, unit is second

Primary Detection Server IP: the server used to response the router's detection packet. This item is only valid for method "Ping" and "Route".

Backup Detection Server IP: the server used to response the router's detection packet. This item is valid for method "Ping" and "Route".

Note: When users choose the "Route" or "Ping" method, it's quite important to make sure that the "Primary Detection Server IP" and "Backup Detection Server IP" are usable and stable, because they have to response the detection packet frequently.

Force reconnect ☒ Enable ☐ Disable
Time 00:00

Force reconnect: this option schedules the pppoe or 3G reconnection by killing the pppd daemon and restart it.

Time: needed time to reconnect

Enable Dial Failure to Restart ☒ Enable ☐ Disable (Default: 10 minutes)

Enable Dial Failure to Restart: If the dial failure will be in the default time to restart

STP

STP ☐ Enable ☒ Disable

STP (Spaning Tree Protocol) can be applied to loop network. Through certain algorithm achieves path redundancy, and loop network cuts to tree-based network without loop in the meantime, thus to avoid the hyperplasia and infinite circulation of a message in the loop network

Optional Configuration

Router Name Four-Faith
Host Name
Domain Name
MTU Auto 1500

Router Name: set router name

Host Name: ISP provides

Domain Name: ISP provides

MTU: auto (1500) and manual (1200-1492 in PPPOE/PPTP/L2TP mode, 576-16320 in other

modes)

Router Internal Network Settings

Router IP

Local IP Address	192	.	168	.	1	.	1
Subnet Mask	255	.	255	.	255	.	0
Gateway	0	.	0	.	0	.	0
Local DNS	0	.	0	.	0	.	0

Local IP Address: IP address of the router

Subnet Mask: the subnet mask of the router

Gateway: set internal gateway of the router. If default, internal gateway is the address of the router

Local DNS: DNS server is auto assigned by network operator server. Users enable to use their own DNS server or other stable DNS servers, if not, keep it default

Network Address Server Settings (DHCP)

These settings for the router's Dynamic Host Configuration Protocol (DHCP) server functionality configuration. The Router can serve as a network DHCP server. DHCP server automatically assigns an IP address for each computer in the network. If they choose to enable the router's DHCP server option, users can set all the computers on the LAN to automatically obtain an IP address and DNS, and make sure no other DHCP server in the network.

DHCP Type	DHCP Server
DHCP Server	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
Start IP Address	192.168.1.100
Maximum DHCP Users	50
Client Lease Time	1440 minutes
Static DNS 1	0.0.0.0
Static DNS 2	0.0.0.0
Static DNS 3	0.0.0.0
WINS	0.0.0.0
Use DNSMasq for DHCP	<input checked="" type="checkbox"/>
Use DNSMasq for DNS	<input checked="" type="checkbox"/>
DHCP-Authoritative	<input checked="" type="checkbox"/>

DHCP Type: DHCP Server and DHCP Forwarder

Xiamen Four-Faith Communication Technology Co.,Ltd.

Page 24 of 81

Add: J1-J3,3rdFloor,No.44,GuanRiRoad,SoftWare Park,XiaMen .361008.China

http: //www.fourfaith.com Tel: +86 592-6300326 6300325 6300324 Fax: +86 592-5912735

Enter DHCP Server if set DHCP Type to DHCP Forwarder as blow:

DHCP Type DHCP Forwarder ▼

DHCP Server 0 0 0 0

DHCP Server: keep the default Enable to enable the router's DHCP server option. If users have already have a DHCP server on their network or users do not want a DHCP server, then select Disable

Start IP Address: enter a numerical value for the DHCP server to start with when issuing IP addresses. Do not start with 192.168.1.1 (the router's own IP address).

Maximum DHCP Users: enter the maximum number of PCs that users want the DHCP server to assign IP addresses to. The absolute maximum is 253 if 192.168.1.2 is users' starting IP address.

Client Lease Time: the Client Lease Time is the amount of time a network user will be allowed connection to the router with their current dynamic IP address. Enter the amount of time, in minutes, that the user will be "leased" this dynamic IP address.

Static DNS (1-3): the Domain Name System (DNS) is how the Internet translates domain or website names into Internet addresses or URLs. Users' ISP will provide them with at least one DNS Server IP address. If users wish to utilize another, enter that IP address in one of these fields. Users can enter up to three DNS Server IP addresses here. The router will utilize them for quicker access to functioning DNS servers.

WINS: the Windows Internet Naming Service (WINS) manages each PC's interaction with the Internet. If users use a WINS server, enter that server's IP address here. Otherwise, leave it blank.

DNSMasq: users' domain name in the field of local search, increase the expansion of the host option, to adopt DNSMasq can assign IP addresses and DNS for the subnet, if select DNSMasq, dhcpd service is used for the subnet IP address and DNS.

Time Settings

Select time zone of your location. To use local time, leave the checkmark in the box next to Use local time.

NTP Client ☒ Enable ☐ Disable

Time Zone UTC+08:00 ▼

Summer Time (DST) last Sun Mar - last Sun Oct ▼

Server IP/Name

NTP Client: Get the system time from NTP server

Time Zone: Time zone options

Summer Time (DST): set it depends on users' location

Server IP/Name: IP address of NTP server, up to 32 characters. If blank, the system will find a server by default

Adjust Time

Adjust Time

Adjust Time: Auto and Manual way. Manual way needs to enter the time. Auto way is to get the time from PC web, click the bottom of setting to modify system time, has system adjust time service. They can change to adjust time by manual to achieve adjust time by the system if the system fails to get NTP server

After modify, click '**Save**' is to change but not take effect, click '**Apply Setting**' to take effect the change or click '**Cancel Changes**' to cancel it. Help information is on the right side of the page.

3.3.1.2 Dynamic DNS

If user's network has a permanently assigned IP address, users can register a domain name and have that name linked with their IP address by public Domain Name Servers (DNS). However, if their Internet account uses a dynamically assigned IP address, users will not know in advance what their IP address will be, and the address can change frequently. In this case, users can use a commercial dynamic DNS service, which allows them to register their domain to their IP address, and will forward traffic directed at their domain to their frequently-changing IP address.

DDNS Service: Four-Faith router currently support DynDNS, freedns, Zoneedit, NO-IP, 3322, easyDNS, TZO, DynSIP and Custom based on the user.

DDNS Service

User Name

Password ☐ Unmask

Host Name

Type

Wildcard ☐

Do not use external ip check ☒ Yes ☐ No

User Name: users register in DDNS server, up to 64 characteristic

Password: password for the user name that users register in DDNS server, up to 32 characteristic

Host Name: users register in DDNS server, no limited for input characteristic for now

Type: depends on the server

Wildcard: support wildcard or not, the default is OFF. ON means *.host.3322.org is equal to host.3322.org

Do not use external ip check: enable or disable the function of 'do not use external ip check'

Force Update Interval (Default: 10 Days, Range: 1 - 60)

Force Update Interval: unit is day, try forcing the update dynamic DNS to the server by setted days

Status

DDNS Status

```
Fri Nov 25 13:58:32 2011: INADYN: Started 'INADYN Advanced version 1.96-ADV' - dynamic DNS updater.
Fri Nov 25 13:58:32 2011: INADYN: IP read from cache file is '192.168.8.222'. No update required.
Fri Nov 25 13:58:32 2011: I:INADYN: IP address for alias 'testsixin.3322.org' needs update to '192.168.8.38'
Fri Nov 25 13:58:33 2011: I:INADYN: Alias 'testsixin.3322.org' to IP '192.168.8.38' updated successfully.
```

DDNS Status shows connection log information

3.3.1.3 Clone MAC Address

Some ISP need the users to register their MAC address. The users can clone the router MAC address to their MAC address registered in ISP if they do not want to re-register their MAC address

MAC Clone

☒ Enable ☐ Disable

Clone LAN(VLAN) MAC

Clone WAN MAC

[Get Current PC MAC Address](#)

Clone MAC address can clone three parts: Clone LAN MAC, Clone WAN MAC, Clone Wireless MAC.

Noted that one MAC address is 48 characteristic, can not be set to the multicast address, the first byte must be even.

3.3.1.4 Advanced Router

Operating Mode: Gateway and Router

Operating Mode

Operating Mode

If the router is hosting users' Internet connection, select Gateway mode. If another router exists on their network, select Router mode.

Dynamic Routing

Dynamic Routing

Interface
Disable

Dynamic Routing enables the router to automatically adjust to physical changes in the network's layout and exchange routing tables with other routers. The router determines the network packets' route based on the fewest number of hops between the source and destination.

To enable the Dynamic Routing feature for the WAN side, select WAN. To enable this feature for the LAN and wireless side, select LAN&WLAN. To enable the feature for both the WAN and LAN, select Both. To disable the Dynamic Routing feature for all data transmissions, keep the default setting, Disable.

Note: Dynamic Routing is not available in Gateway mode

Static Routing

Add

Enter relevant bridge IP address and subnet mask, click 'Add' to create a bridge.

Note: Only create a bridge can apply it.

Assign to Bridge

Assignment 0 none Interface vlan1 Prio 63 Delete

Add

none
br0
br1

Assign to Bridge option: to assign different ports to created bridge. For example: assign port (wireless port) is vlan1 in br1 bridge as below:

Prio means priority level: work if multiple ports are within the same bridge. The smaller the number, the higher the level. Click 'Add' to take it effect.

Note: corresponding interface of WAN ports interface should not be binding, this bridge function is basically used for LAN port, and should not be binding with WAN port

If bind success, bridge binding list in the list of current bridging table is as below:

Current Bridging Table

Bridge Name	STP enabled	Interfaces
br0	no	vlan0
br1	yes	vlan1

Auto-Refresh is On

To make br1 bridge has the same function with DHCP assigned address, users need to set multiple DHCP function, see the introduction of multi-channel DHCPD:

Port Setup

Network Configuration eth2 Unbridged Default

Network Configuration vlan0 Unbridged Default

Network Configuration **vlan1** Unbridged Default

Network Configuration apcl0 Unbridged Default

Network Configuration wds0 Unbridged Default

Network Configuration wds1 Unbridged Default

Network Configuration wds2 Unbridged Default

Network Configuration wds3 Unbridged Default

Network Configuration br0 Unbridged Default

Port Setup: Set the port property, the default is not set

Network Configuration	vlan1	<input checked="" type="radio"/> Unbridged	<input type="radio"/> Default
MTU	<input type="text" value="1500"/>		
Multicast forwarding	<input type="radio"/> Enable <input checked="" type="radio"/> Disable		
Masquerade / NAT	<input checked="" type="radio"/> Enable <input type="radio"/> Disable		
IP Address	<input type="text" value="0"/> . <input type="text" value="0"/> . <input type="text" value="0"/> . <input type="text" value="0"/>		
Subnet Mask	<input type="text" value="0"/> . <input type="text" value="0"/> . <input type="text" value="0"/> . <input type="text" value="0"/>		

Choose not bridge to set the port's own properties, detailed properties are as below:

MTU: maximum transfer unit

Multicast forwarding: enable or disable multicast forwarding

Masquerade/NAT: enable or disable Masquerade/NAT

IP Address: set vlan1's IP address, and do not conflict with other ports or bridge

Subnet Mask: set the port's subnet mask

Multiple DHCP Server								
DHCP 0	<input type="text" value="vlan1"/>	<input type="text" value="On"/>	Start	<input type="text" value="100"/>	Max	<input type="text" value="50"/>	Leasetime	<input type="text" value="3600"/>
<input type="button" value="Delete"/>								
<input type="button" value="Add"/>								

Multiple DHCPD: using multiple DHCP service. Click 'Add' in multiple DHCP server to appear relevant configuration. The first means the name of port or bridge (do not be configured as eth0), the second means whether to on DHCP. Start means start address, Max means maximum assigned DHCP clients, Leasetime means the client lease time, the unit is second, click 'Save' or 'Apply' to put it into effect after setting.

Note: Only configure and click 'Save' can configure the next, can not configure multiple DHCP at the same time.

3.3.2 Services

3.3.2.1 Services

DHCP Client

DHCP Client	
Set Vendorclass	<input type="text"/>
Request IP	<input type="text"/>

Set Vendorclass: the DHCP server can automatically identify the specific identifier of the computer running certain operating systems to send, such as the DHCP server can identify the **Xiamen Four-Faith Communication Technology Co.,Ltd.**

Page 32 of 81

Add: J1-J3,3rdFloor,No.44,GuanRiRoad,SoftWare Park,XiaMen .361008.China

http: //www.fourfaith.com Tel: +86 592-6300326 6300325 6300324 Fax: +86 592-5912735

DHCP client running the operating system is Windows 2000 or Windows 98. Identification identifier DHCP option can be assigned to DHCP clients based on specific operating system.

Request IP: IP address of the request

DHCP Server

DHCPd assigns IP addresses to users local devices. While the main configuration is on the setup page users can program some nifty special functions here.

DHCP Server

Use JFFS2 for client lease DB (Not mounted)

Use NVRAM for client lease DB ☐

Used Domain WAN

LAN Domain

Additional DHCPd Options

Static Leases			
MAC Address	Host Name	IP Address	Client Lease Time
			minutes

Add Remove

Use NVRAM for client lease DB: users can store data to the system NVRAM area is enabled

Used domain: users can select here which domain the DHCP clients should get as their local domain. This can be the WAN domain set on the Setup screen or the LAN domain which can be set here.

LAN Domain: users can define here their local LAN domain which is used as local domain for DNSmasq and DHCP service if chose above.

Static Leases: if users want to assign certain hosts a specific address then they can define them here. This is also the way to add hosts with a fixed address to the router's local DNS service (DNSmasq).

Additional DHCPd Options: some extra options users can set by entering them

DNSMasq

DNSmasq is a local DNS server. It will resolve all host names known to the router from dhcp (dynamic and static) as well as forwarding and caching DNS entries from remote DNS servers. Local DNS enables DHCP clients on the LAN to resolve static and dynamic DHCP hostnames.

DNSMasq

DNSMasq	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
Local DNS	<input type="radio"/> Enable <input checked="" type="radio"/> Disable
No DNS Rebind	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
Additional DNSMasq Options	<div></div>

Local DNS: enables DHCP clients on the LAN to resolve static and dynamic DHCP hostnames

No DNS Rebind: when enabled, it can prevent an external attacker to access the router's internal Web interface. It is a security measure

Additional DNSMasq Options: some extra options users can set by entering them in Additional DNS Options.

For example:

static allocation: dhcp-host=AB:CD:EF:11:22:33,192.168.0.10,myhost,myhost.domain,12h

max lease number: dhcp-lease-max=2

DHCP server IP range: dhcp-range=192.168.0.110,192.168.0.111,12h

SNMP

SNMP

SNMP	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
Location	<input type="text" value="Unknown"/>
Contact	<input type="text" value="root"/>
Name	<input type="text" value="four-faith"/>
RO Community	<input type="text" value="public"/>
RW Community	<input type="text" value="private"/>

Location: equipment location

Contact: contact this equipment management

Name: device name

RO Community: SNMP RO community name, the default is public, Only to read.

RW Community: SNMP RW community name, the default is private, Read-write permissions

SSHD

Enabling SSHd allows users to access the Linux OS of their router with an SSH client

Secure Shell

SShd	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
SSH TCP Forwarding	<input type="radio"/> Enable <input checked="" type="radio"/> Disable
Password Login	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
Port	<input type="text" value="22"/> (Default: 22)
Authorized Keys	<input type="text"/>

SSH TCP Forwarding: enable or disable to support the TCP forwarding

Password Login: allows login with the router password (username is root)

Port: port number for SSHD (default is 22)

Authorized Keys: here users paste their public keys to enable key-based login (more secure than a simple password)

System log

Enable Syslogd to capture system messages. By default they will be collected in the local file /var/log/messages. To send them to another system, enter the IP address of a remote syslog server.

System Log

Syslogd	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
Syslog Out Mode	<input checked="" type="radio"/> Net <input type="radio"/> Console
Remote Server	<input type="text"/>

Syslog Out Mode: two log mode

Net: the log information output to a syslog server

Console: the log information output to console port

Remote Server: if choose net mode, users should input a syslog server's IP Address and run a syslog server program on it.

Telnet

Telnet

Telnet	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
--------	---

Telnet: enable a telnet server to connect to the router with telnet. The username is root and the password is the router's password.

Note: If users use the router in an untrusted environment (for example as a public hotspot), it is strongly recommended to use SSHd and deactivate telnet.

3.3.3.4 IPSEC

Connect Status and Control

Show IPSEC connection and status of current router on IPSEC page.

Connection status and control

Name	Type	Common Name	status	Action
Add				

Name: the name of IPSEC connection

Type: The type and function of current IPSEC connection

Common name: local subnet, local address, opposite end address and opposite end subnet of current connection

Status: connection status: closed, negotiating, establish

Closed: this connection does not launch a connection request to opposite end

Negotiating: this connection launch a request to opposite end, is under negotiating, the connection has not been established yet

Establish: the connection has been established, enabled to use this tunnel

Action: the action of this connection, current is to delete, edit, reconnect and enable

Delete: to delete the connection, also will delete IPSEC if IPSEC has set up

Edit: to edit the configure information of this connection, reload this connection to make the configuration effect after edit

Reconnect: this action will remove current tunnel, and re-launch tunnel establish request

Enable: when the connection is enable, it will launch tunnel establish request when the system reboot or reconnect, otherwise the connection will not do it

Add: to add a new IPSEC connection

Add IPSEC connection or edit IPSEC connection

Type: to choose IPSEC mode and relevant functions in this part, supports tunnel mode client, tunnel mode server and transfer mode currently

Type

Type

IPSEC role ☒ Client ☐ Server

Connection: this part contains basic address information of the tunnel

Connection

Name	<input type="text"/>	Enabled	<input checked="" type="checkbox"/>
Local WAN Interface	vlan1 <input type="button" value="v"/>	Remote Host address	<input type="text"/>
Local Subnet	<input type="text"/>	Remote subnet	<input type="text"/>
Local Id	<input type="text"/>	Remote ID	<input type="text"/>

Name: to indicate this connection name, must be unique

Enabled: If enable, the connection will send tunnel connection request when it is reboot or re-connection, otherwise it is no need if disable

Local WAN Interface: local addresss of the tunnel

Remote Host Address: IP/domain name of end opposite; this option can not fill in if using tunnel mode server

Local Subnet: IPSec local protects subnet and subnet mask, i.e. 192.168.1.0/24; this option can not fill in if using transfer mode

Remote Subnet: IPSec opposite end protects subnet and subnet mask, i.e.192.168.7.0/24; this option can not fill in if using transfer mode

Local ID: tunnel local end identification, IP and domain name are available

Remote ID: tunnel opposite end identification, IP and domain name are available

Detection: this part contains configure information of connection detection

Detection

Enable DPD Detection ☒

Time Interval (S) Timeout (S) Action

Enable Connection Detection ☒

Enable DPD Detection: enable or disable this function, tick means enable

Time Interval: set time interval of connect detection (DPD)

Timeout: set the timeout of connect detection

Action: set the action of connect detection

Advanced Settings: this part contains relevant setting of IKE, ESP, negotiation mode, etc.

Advanced Settings

Enable advanced settings ☒

IKE Encryption IKE Integrity IKE Groupype

IKE Lifetime hours

ESP Encryption ESP Integrity

ESP Keylife hours

☐ IKE+ESP: Use only proposed settings.

☐ IKE aggressive mode allowed. Avoid if possible (preshared key is transmitted in clear text)!

☒ Perfect Forward Secrecy (PFS)

☐ Negotiate payload compression

Enable Advanced Settings: enable to configure 1st and 2nd phase information, otherwise it will automic negotiation according to opposite end

IKE Encryption: IKE phased encryption mode

IKE Integrity: IKE phased integrity solution

IKE Groupype: DH exchange algorithm

IKE Lifetime: set IKE lifetime, current unit is hour, the default is 0

ESP Encryption: ESP encryption type

ESP Integrity: ESP integrity solution

ESP Keylife: set ESP keylife, current unit is hour, the default is 0

IKE aggressive mode allowed: negotiation mode adopt aggressive mode if tick; it is main mode if non-tick

Negotiate payload compression: Tick to enable PFS, non-tick to diable PFS

Authentication: choose use share encryption option or certificate authentication option. Current is only to choose use share encryption option.

Authentication

☒ Use a Pre-Shared Key:

☐ Generate and use the X.509 certificate

3.3.3.5 GRE

GRE (Generic Routing Encapsulation, Generic Routing Encapsulation) protocol is a network layer protocol (such as IP and IPX) data packets are encapsulated, so these encapsulated data packets to another network layer protocol (IP)transmission. GRE Tunnel (tunnel) technology, Layer Two Tunneling Protocol VPN (Virtual Private Network).

GRE Tunnel

GRE Tunnel ☐ Enable ☒ Disable

GRE Tunnel: enable or disable GRE function

Number	1 (fff) ▼	Delete
Status	Enable ▼	
Name	fff	
Through	PPP ▼	
Peer Wan IP Addr	120.42.46.98	
Peer Subnet	192.168.5.0/24	(eg:192.168.1.0/24)
Peer Tunnel IP	200.200.200.1	
Local Tunnel IP	200.200.200.5	
Local Netmask	255.255.255.0	

Number: Switch on/off GRE tunnel app

Status: Switch on/off someone GRE tunnel app

Name: GRE tunnel name

Through: The GRE packet transmit interface

Peer Wan IP Addr: The remote WAN address

Peer Subnet: The remote gateway local subnet, eg: 192.168.1.0/24

Peer Tunnel IP: The remote tunnel ip address

Local Tunnel IP: The local tunnel ip address

Local Netmask: Netmask of local network

Keepalive	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
Retry times	
Interval	
Fail Action	Hold ▼

Keepalive: Enable or disable GRE Keepalive function

Retry times: GRE keepalive detect fail retries

Interval: The time interval of GRE keepalive packet sent

Fail Action: The action would be exec after keeping alive failed

Click on “**View GRE tunnels**” keys can view the information of GRE

GRE Tunnels list

Number	Name	Enable	Through	Peer Wan IP Addr	Peer Subnet	Peer Tunnel IP	Local Tunnel IP	Local Netmask	Keepalive	Retry times	Interval	Fail Action
1	fff	Yes	PPP	120.42.46.98	192.168.5.0/24	200.200.200.1	200.200.200.5	255.255.255.0	No	0	0	Hold

3.3.4 Security

3.3.4.1 Firewall

You can enable or disable the firewall, filter specific Internet data types, and prevent anonymous Internet requests, ultimately enhance network security.

Firewall Protection

Firewall Protection

SPI Firewall
☒ Enable
☐ Disable

Firewall enhance network security and use SPI to check the packets into the network. To use firewall protection, choose to enable otherwise disabled. Only enable the SPI firewall, you can use other firewall functions: filtering proxy, block WAN requests, etc.

Additional Filters

Additional Filters

☐ Filter Proxy
☐ Filter Cookies
☐ Filter Java Applets
☐ Filter ActiveX

Filter Proxy: Wan proxy server may reduce the security of the gateway, Filtering Proxy will refuse any access to any wan proxy server. Click the check box to enable the function otherwise disabled.

Filter Cookies: Cookies are the website of data the data stored on your computer. When you interact with the site, the cookies will be used. Click the check box to enable the function otherwise disabled.

Filter Java Applets: If refuse to Java, you may not be able to open web pages using the Java programming. Click the check box to enable the function otherwise disabled.

Filter ActiveX: If refuse to ActiveX, you may not be able to open web pages using the ActiveX programming. Click the check box to enable the function otherwise disabled.

Prevent WAN Request

Block WAN Requests

☒ Block Anonymous WAN Requests (ping)
☒ Filter IDENT (Port 113)
☒ Block WAN SNMP access

Block Anonymous WAN Requests (ping): By selecting “Block Anonymous WAN Requests (ping)” box to enable this feature, you can prevent your network from the Ping or detection of other Internet users. so that make More difficult to break into your network. The default state of

this feature is enabled ,choose to disable allow anonymous Internet requests.

Filter IDENT (Port 113): Enable this feature can prevent port 113 from being scanned from outside. Click the check box to enable the function otherwise disabled.

Block WAN SNMP access: This feature prevents the SNMP connection requests from the WAN. After Complete the changes, click the **Save Settings** button to save your changes. Click the **Cancel Changes** button to cancel unsaved changes.

Impede WAN DoS/Bruteforce

Impede WAN DoS/Bruteforce

☐ Limit SSH Access
☐ Limit Telnet Access
☐ Limit PPTP Server Access
☐ Limit L2TP Server Access

Limit ssh Access: This feature limits the access request from the WAN by ssh, and per minute up to accept two connection requests on the same IP. Any new access request will be automatically dropped.

Limit Telnet Access: This feature limits the access request from the WAN by Telnet, and per minute up to accept two connection requests on the same IP. Any new access request will be automatically dropped.

Limit PPTP Server Access: When build a PPTP Server in the router,this feature limits the access request from the WAN by ssh, and per minute up to accept two connection requests on the same IP . Any new access request will be automatically dropped.

Limit L2TP Server Access: When build a L2TP Server in the router, this feature limits the access request from the WAN by ssh, and per minute up to accept two connection requests on the same IP. Any new access request will be automatically dropped.

Log Management

The router can keep logs of all incoming or outgoing traffic for your Internet connection.

Log

Log
☐ Enable
☒ Disable

Log: To keep activity logs, select Enable. To stop logging, select Disable. When select enable, the following page will appear.

Log

Log ☒ Enable ☐ Disable

Log Level High

Options

Dropped Disable

Rejected Enable

Accepted Enable

Log Level: Set this to the required log level. Set Log Level higher to log more actions.

Options: When select Enable, the corresponding connection will be recorded in the journal, the disabled are not recorded.

Incoming Log: To see a temporary log of the Router's most recent incoming traffic, click the Incoming Log button.

Incoming Log Table

Source IP	Protocol	Destination Port Number	Rule
Refresh Close			

Outgoing Log: To see a temporary log of the Router's most recent outgoing traffic, click the Outgoing Log button.

Outgoing Log Table

LAN IP	Destination URL/IP	Protocol	Service/Port Number	Rule
192.168.1.164	223.203.188.56	TCP	www	Accepted
192.168.1.164	183.60.16.200	UDP	8000	Accepted
192.168.1.164	183.60.48.60	UDP	8000	Accepted
192.168.1.164	112.95.240.183	UDP	8000	Accepted
192.168.1.164	183.60.49.245	UDP	8000	Accepted
192.168.1.164	119.147.32.204	UDP	8000	Accepted
192.168.1.164	112.90.86.244	UDP	8000	Accepted
192.168.1.164	119.147.45.157	UDP	8000	Accepted
192.168.1.164	183.60.49.15	UDP	8000	Accepted
192.168.1.164	183.60.16.70	UDP	8000	Accepted
192.168.1.164	183.60.16.200	UDP	8000	Accepted
192.168.1.164	183.60.48.60	UDP	8000	Accepted

Click the **Save Settings** button to save your changes. Click the **Cancel Changes** button to cancel unsaved changes.

3.3.4.2 VPN Passthrough

Virtual Private Networking (VPN) is typically used for work-related networking. For VPN tunnels, the router supports OPENVPN Passthrough, PPTP Passthrough and L2TP Passthrough.

Virtual Private Network (VPN)

VPN Passthrough

IPSec Passthrough	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
PPTP Passthrough	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
L2TP Passthrough	<input checked="" type="radio"/> Enable <input type="radio"/> Disable

IPSec Passthrough: Internet Protocol Security (IPSec) is a suite of protocols used to implement secure exchange of packets at the IP layer. To allow IPSec tunnels to pass through the router, IPSec Passthrough is enabled by default. To disable IPSec Passthrough, select Disable.

PPTP Passthrough: Point-to-Point Tunneling Protocol is the method used to enable VPN sessions to a Windows NT 4.0 or 2000 server. To allow PPTP tunnels to pass through the router, PPTP Passthrough is enabled by default. To disable PPTP Passthrough, select Disable.

L2TP Passthrough: Layer Two (2) Tunneling Protocol, an extension to the PPP protocol that enables ISPs to operate Virtual Private Networks (VPNs). L2TP merges the best features of two other tunneling protocols: PPTP from Microsoft and L2F from Cisco Systems. To allow L2TP tunnels to pass through the router, L2TP Passthrough is enabled by default. To disable L2TP Passthrough, select Disable.

Click the **Save Settings** button to save your changes. Click the **Cancel Changes** button to cancel unsaved changes.

3.3.5 Access Restrictions

3.3.5.1 WAN Access

Use access restrictions, you can block or allow specific types of Internet applications. You can set specific PC-based Internet access policies. This feature allows you to customize up to ten different Internet Access Policies for particular PCs, which are identified by their IP or MAC addresses.

Access Policy

Policy	1 () <input type="button" value="Delete"/> <input type="button" value="Summary"/>
Status	<input type="radio"/> Enable <input checked="" type="radio"/> Disable
Policy Name	<input type="text"/>
PCs	<input type="button" value="Edit List of clients"/>
<input type="radio"/> Deny	Internet access during selected days and hours.
<input checked="" type="radio"/> Filter	

Two options in the default policy rules: "Filter" and "reject". If select "Deny", you will deny specific computers to access any Internet service at a particular time period. If you choose to

"filter", It will block specific computers to access the specific sites at a specific time period. You can set up 10 Internet access policies filtering specific PCs access Internet services at a particular time period.

Access Policy: You may define up to 10 access policies. Click Delete to delete a policy or Summary to see a summary of the policy.

Status: Enable or disable a policy.

Policy Name: You may assign a name to your policy.

PCs: The part is used to edit client list, the strategy is only effective for the PC in the list.

Days

Enter the IP Range of the clients	
IP Range 01	192. 168. 1. 19 ~ 192. 168. 1. 30
IP Range 02	0. 0. 0. 0 ~ 0. 0. 0. 0

set up Internet access policy

1. Select the policy number (1-10) in the drop-down menu.
2. For this policy is enabled, click the radio button next to "Enable"
3. Enter a name in the Policy Name field.
4. Click the Edit List of PCs button.
5. On the List of PCs screen, specify PCs by IP address or MAC address. Enter the appropriate IP addresses into the IP fields. If you have a range of IP addresses to filter, complete the appropriate IP Range fields. Enter the appropriate MAC addresses into the MAC fields.
6. Click the Apply button to save your changes. Click the Cancel button to cancel your unsaved changes. Click the Close button to return to the Filters screen.
7. If you want to block the listed PCs from Internet access during the designated days and time, then keep the default setting, Deny. If you want the listed PCs to have Internet filtered during the designated days and time, then click the radio button next to Filter.
8. Set the days when access will be filtered. Select Everyday or the appropriate days of the week.
9. Set the time when access will be filtered. Select 24 Hours, or check the box next to From and

use the drop-down boxes to designate a specific time period.

10. Click the Add to Policy button to save your changes and active it.

11. To create or edit additional policies, repeat steps 1-9.

12. To delete an Internet Access Policy, select the policy number, and click the Delete button.

Note:

- 1) The default factory value of policy rules is "filtered". If the user chooses the default policy rules for "refuse", and editing strategies to save or directly to save the settings. If the strategy edited is the first, it will be automatically saved into the second, if not the first, keep the original number.
- 2) Turn off the power of the router or reboot the router can cause a temporary failure. After the failure of the router, if can not automatically synchronized NTP time server, you need to recalibrate to ensure the correct implementation of the relevant period control function.

3.3.5.2 Packet Filter

To block some packets getting Internet access or block some Internet packets getting local network access, you can configure filter items to block these packets.

Packet Filter

Packet filter function is realized based on IP address or port of packets.

Enable Packet Filter ☒ Enable ☐ Disable

Policy Discard packets conform to the following rules ▼

Enable Packet Filter: Enable or disable “packet filter” function

Policy: The filter rule’s policy, you can choose the following options

Discard The Following--Discard packets conform to the following rules, Accept all other packets

Only Accept The Following-- Accept only the data packets conform to the following rules, Discard all other packets

Add Filter Rule

Direction

input: packet from WAN to LAN

output: packet from LAN to WAN

Protocol: packet protocol type

Source Ports: packet's source port

Destination Ports: packet's destination port

Source IP: packet's source IP address

Destination IP: packet's destination IP address

Note: "Source Port" ,"Destination Port" ,"Source IP" ,"Destination IP" could not be all empty ,you have to input at least one of these four parameters.

3.3.6 NAT

3.3.6.1 Port Forwarding

Port Forwarding allows you to set up public services on your network, such as web servers, ftp servers, e-mail servers, or other specialized Internet applications. Specialized Internet applications are any applications that use Internet access to perform functions such as videoconferencing or online gaming. When users send this type of request to your network via the Internet, the router will forward those requests to the appropriate PC. If you want to forward a whole range of ports, see [Port Range Forwarding](#).

Forwards

Application	Protocol	Source Net	Port from	IP Address	Port to	Enable
web	TCP	192.168.8.11	8000	192.168.1.12	80	<input checked="" type="checkbox"/>
ftp	Both	192.168.8.12	24	192.168.1.12	21	<input checked="" type="checkbox"/>

[Add](#) [Remove](#)

Application: Enter the name of the application in the field provided.

Protocol: Chose the right protocol TCP,UDP or Both. Set this to what the application requires.

Source Net: Forward only if sender matches this ip/net (example 192.168.1.0/24).

Port from: Enter the number of the external port (the port number seen by users on the Internet).

IP Address: Enter the IP Address of the PC running the application.

Port to: Enter the number of the internal port (the port number used by the application).

Enable: Click the Enable checkbox to enable port forwarding for the application.

Check all values and click **Save Settings** to save your settings. Click the **Cancel changes** button to cancel your unsaved changes.

3.3.6.2 Port Range Forward

Port Range Forwarding allows you to set up public services on your network, such as web servers, ftp servers, e-mail servers, or other specialized Internet applications. Specialized Internet

Xiamen Four-Faith Communication Technology Co.,Ltd.

Add: J1-J3,3rdFloor,No.44,GuanRiRoad,SoftWare Park,XiaMen .361008.China

http: //www.fourfaith.com Tel: +86 592-6300326 6300325 6300324 Fax: +86 592-5912735

applications are any applications that use Internet access to perform functions such as videoconferencing or online gaming. When users send this type of request to your network via the Internet, the router will forward those requests to the appropriate PC. If you only want to forward a single port, see [Port Forwarding](#).

Port Range Forward

Forwards

Application	Start	End	Protocol	IP Address	Enable
web-tftp	800	8100	Both	192.168.1.16	<input checked="" type="checkbox"/>
game	9000	10000	Both	192.168.1.16	<input checked="" type="checkbox"/>

[Add](#) [Remove](#)

Application: Enter the name of the application in the field provided.

Start: Enter the number of the first port of the range you want to seen by users on the Internet and forwarded to your PC.

End: Enter the number of the last port of the range you want to seen by users on the Internet and forwarded to your PC.

Protocol: Chose the right protocol TCP,UDP or Both. Set this to what the application requires.

IP Address: Enter the IP Address of the PC running the application.

Enable: Click the Enable checkbox to enable port forwarding for the application.

Check all values and click **Save Settings** to save your settings. Click the **Cancel changes** button to cancel your unsaved changes.

3.3.6.3 Port Triggering

Port Triggering allows you to do port forwarding without setting a fixed PC. By setting Port Triggering rules, you can allow inbound traffic to arrive at a specific LAN host, using ports different than those used for the outbound traffic. This is called port triggering since the outbound traffic triggers to which ports inbound traffic is directed.

Port Triggering

Forwards

Application	Triggered Port Range		Protocol	Forwarded Port Range		Enable
	Start	End		Start	End	
web	8000	10000	Both	20	800	<input checked="" type="checkbox"/>

[Add](#) [Remove](#)

If you want to forward ports to a PC with a static IP address, see [Port Forwarding](#) or [Port Range Forwarding](#).

Application: Enter the name of the application in the field provided.

Triggered Port Range: Enter the number of the first and the last port of the range, which should be triggered. If a PC sends outbound traffic from those ports, incoming traffic on the Forwarded

Range will be forwarded to that PC.

Forwarded Port Range: Enter the number of the first and the last port of the range, which should be forwarded from the Internet to the PC, which has triggered the Triggered Range.

Enable :Click the Enable checkbox to enable port triggering for the application.

Check all values and click Save Settings to save your settings. Click the Cancel changes button to cancel your unsaved changes.

3.3.6.4 DMZ

The DMZ (DeMilitarized Zone) hosting feature allows one local user to be exposed to the Internet for use of a special-purpose service such as Internet gaming or videoconferencing. DMZ hosting forwards all the ports at the same time to one PC. The Port Forwarding feature is more secure because it only opens the ports you want to have opened, while DMZ hosting opens all the ports of one computer, exposing the computer so the Internet can see it.

Demilitarized Zone (DMZ)

DMZ

Use DMZ ☒ Enable ☐ Disable

DMZ Host IP Address 192.168.8.

Any PC whose port is being forwarded must should have a new static IP address assigned to it because its IP address may change when using the DHCP function.

DMZ Host IP Address: To expose one PC to the Internet, select Enable and enter the computer's IP address in the DMZ Host IP Address field. To disable the DMZ, keep the default setting : Disable

Check all values and click **Save Settings** to save your settings. Click the **Cancel changes** button to cancel your unsaved changes.

3. 3. 7 QoS Setting

3.3.7.1 Basic

Bandwidth management prioritizes the traffic on your router. Interactive traffic (telephony, browsing, telnet, etc.) gets priority and bulk traffic (file transfer, P2P) gets low priority. The main goal is to allow both types to live side-by side without unimportant traffic disturbing more critical things. All of this is more or less automatic.

QoS allows control of the bandwidth allocation to different services, netmasks, MAC addresses and the four LAN ports.

Main WAN QoS Settings

Start QoS ☐ Enable ☒ Disable

Port WAN

Packet Scheduler HTB

Uplink (kbps) 0

Downlink (kbps) 0

Bkup WAN QoS Settings

Start QoS ☐ Enable ☒ Disable

Port WAN

Packet Scheduler HTB

Uplink (kbps) 0

Downlink (kbps) 0

Uplink (kbps): In order to use bandwidth management (QoS) you must enter bandwidth values for your uplink. These are generally 80% to 90% of your maximum bandwidth.

Downlink (kbps): In order to use bandwidth management (QoS) you must enter bandwidth values for your downlink. These are generally 80% to 90% of your maximum bandwidth.

3.3.7.2 Classify

Netmask Priority

Netmask Priority

Delete	IP/Mask	Priority
<input type="checkbox"/>	192.168.1.1/24	Exempt
<input type="checkbox"/>	192.168.2.3/24	Standard
<input type="checkbox"/>	192.168.3.4/32	Express
<input type="checkbox"/>	192.168.4.5/32	Bulk
<div> Add <div> <input type="text" value="0"/> <input type="text" value="0"/> <input type="text" value="0"/> <input type="text" value="0"/> </div> / <input type="text" value="0"/> </div>		

You may specify priority for all traffic from a given IP address or IP Range.

3.3.7.3 Load Arrange

Load Shunt

Load Shunt

Load Shunt

Delete	Source Net	Destintaion Net	Protocol	Source Ports	Destination Ports	WAN
Add	0.0.0.0/0	0.0.0.0/0	tcp	1- 65535	1- 65535	Main ▼

This part is for limit data stream to access the Internet via the link (main link or backup link). When data stream is compliance with the rules in the list, it will access the Internet by setted link, if the link does not exist, data stream will be accessed by another link

When a data stream conforms to the rule, it will use specified link of last rule.

When you enable load balancer function, data streams that corresponding to shunt list rules still access the Internet according to the links of the list rules, regardless of the proportion of data stream.

Load Balancer

Load Balancer

Load Balancer

☒ Enable
 ☐ Disable

Relative ▼ : WAN1:WAN2 weighted ratio 1 : 1

Relative
Absolute

Assuming that the bandwidth of main and backup links were Akbps with Bkps.

When load balancer is disabled, and data streams do not comply with shunt list, then it will only use main link to access the Internet. Only when main link is down, will it use backup link.

When enable load balancer, data streams that do not meet the shunt list will use main and backup link. If the ratio is A: B (recommended ratio), then total bandwidth is (A + B) kbps. If it is A: 0, the data will only use main link, total bandwidth remains A kbp; if it is 0: B, the data will only use backup link, total bandwidth is B kbp.

When you select 'Relative' way, the unit of load balancer is socket connection, a socket connection fixed using a link.

When selecting "absolute" mode, the unit of load balancer is data packet, the device receives 1st data, main link will be used, 2nd data using backup link, 3rd data using main link, 4th data using backup link, cycle in this order.

Note: fill in the proportion of two co-prime integers, and the smaller for both value, the better. Assume that main link was 390kbp, backup link was 130kbp, then recommended ratio is 3:1, instead of 390:130 or 39:13 and others. If main and backup link is 400kbps and 130kbps, best ratio is 40:13. You had better further divide it to achieve the best result, rough ratio is 3.07:1, can get the ratio as 3:1.

Check all values and click **Save Settings** to save your settings. Click the **Cancel changes** button to cancel your unsaved changes.

3.3.8 Applications

3.3.8.1 Serial Applications

There is a console port on Four-Faith router. Normally, this port is used to debug the router. This port can also be used as a serial port. The router has embedded a serial to TCP program. The data sent to the serial port is encapsulated by TCP/IP protocol stack and then is sent to the destination server. This function can work as a Four-Faith DTU (Data Terminal Unit). Please refer www.four-faith.com for more information about this product.

Flow Control	None ▼

3.3.9 Administration

3.3.9.1 Management

The Management screen allows you to change the router's settings. On this page you will find most of the configurable items of the router code.

Router Password

Router Username
Router Password
Re-enter to confirm

The new password must not exceed 32 characters in length and must not include any spaces. Enter the new password a second time to confirm it.

Note:

Default username is root.

It is strongly recommended that you change the factory default password of the router, which is admin. All users who try to access the router's web-based utility or Setup Wizard will be prompted for the router's password.

Web Access

This feature allows you to manage the router using either HTTP protocol or the HTTPS protocol. If you choose to disable this feature, a manual reboot will be required. You can also activate or not the router information web page. It's now possible to password protect this page (same username and password than above).

Web Access

Protocol	<input checked="" type="checkbox"/> HTTP <input type="checkbox"/> HTTPS
Auto-Refresh (in seconds)	3
Enable Info Site	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
Info Site Password Protection	<input type="checkbox"/> Enabled

Protocol: This feature allows you to manage the router using either HTTP protocol or the HTTPS protocol

Xiamen Four-Faith Communication Technology Co.,Ltd.

Auto-Refresh: Adjusts the Web GUI automatic refresh interval. 0 disables this feature completely

Enable Info Site: Enable or disable the login system information page

Info Site Password Protection: Enable or disable the password protection feature of the system information page

Remote Access

Web GUI Management	<input checked="" type="radio"/> Enable <input type="radio"/> Disable	
Use HTTPS	<input type="checkbox"/>	
Web GUI Port	<input type="text" value="8088"/>	(Default: 8088, Range: 1 - 65535)
SSH Management	<input checked="" type="radio"/> Enable <input type="radio"/> Disable	
SSH Remote Port	<input type="text" value="22"/>	(Default: 22, Range: 1 - 65535)
Telnet Management	<input type="radio"/> Enable <input checked="" type="radio"/> Disable	

Remote Access: This feature allows you to manage the router from a remote location, via the Internet. To disable this feature, keep the default setting, Disable. To enable this feature, select Enable, and use the specified port (default is 8080) on your PC to remotely manage the router. You must also change the router's default password to one of your own, if you haven't already.

To remotely manage the router, enter `http://xxx.xxx.xxx.xxx:8080` (the x's represent the router's Internet IP address, and 8080 represents the specified port) in your web browser's address field. You will be asked for the router's password.

If you use https you need to specify the url as `https://xxx.xxx.xxx.xxx:8080` (not all firmwares does support this without rebuilding with SSL support).

SSH Management: You can also enable SSH to remotely access the router by Secure Shell. Note that SSH daemon needs to be enable in Services page.

Note:

If the Remote Router Access feature is enabled, anyone who knows the router's Internet IP address and password will be able to alter the router's settings.

Telnet Management: Enable or disable remote Telnet function

Cron

Cron	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
Additional Cron Jobs	<input type="text"/>

Cron : The cron subsystem schedules execution of Linux commands. You'll need to use the command line or startup scripts to actually use this.

Language Selection

Language	<input type="text" value="English"/>
----------	--------------------------------------

Language: Set up the router page shows the type of language, including simplified Chinese and English.

You can schedule regular reboots for the router :

Regularly after xxx seconds.

At a specific date time each week or everyday.

Note:

For date based reboots Cron must be activated. See Management for Cron activation.

3.3.9.3 Commands

Commands: You are able to run command lines directly via the Webinterface.

Command Shell

Commands

Run Commands

Save Startup

Save Shutdown

Save Firewall

Save Custom Script

Run Command: You can run command lines via the web interface. Fill the text area with your command and click Run Commands to submit.

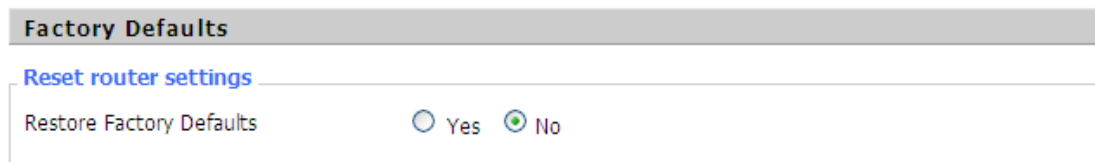

Startup: You can save some command lines to be executed at startup's router. Fill the text area with commands (only one command by row) and click Save Startup.

Shutdown: You can save some command lines to be executed at shutdown's router. Fill the text area with commands (only one command by row) and click Save Shutdown.

Firewall: Each time the firewall is started, it can run some custom iptables instructions. Fill the text area with firewall's instructions (only one command by row) and click Save Firewall.

Custom Script: Custom script is stored in /tmp/custom.sh file. You can run it manually or use cron to call it. Fill the text area with script's instructions (only one command by row) and click Save Custom Script.

3.3.9.4 Factory Defaults

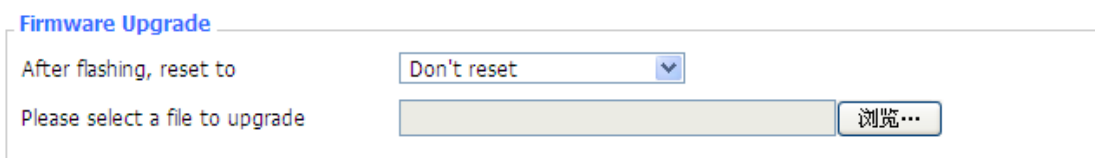

The screenshot shows the 'Factory Defaults' section of the web interface. It includes a link 'Reset router settings' and a form with the text 'Restore Factory Defaults' followed by two radio buttons: 'Yes' and 'No'. The 'No' button is selected.

Reset router settings: Click the Yes button to reset all configuration settings to their default values. Then click the Apply Settings button.

Note:

Any settings you have saved will be lost when the default settings are restored. After restoring the router is accessible under the default IP address 192.168.1.1 and the default password admin.

3.3.9.5 Firmware Upgrade

The screenshot shows the 'Firmware Upgrade' section of the web interface. It includes a dropdown menu labeled 'After flashing, reset to' with 'Don't reset' selected. Below it is a text input field labeled 'Please select a file to upgrade' and a '浏览...' (Browse) button.

Firmware Upgrade: New firmware versions are posted at www.four-faith.com and can be downloaded. If the Router is not experiencing difficulties, then there is no need to download a more recent firmware version, unless that version has a new feature that you want to use.

Note:

When you upgrade the Router's firmware, you lose its configuration settings, so make sure you write down the Router settings before you upgrade its firmware.

To upgrade the Router's firmware:

1. Download the firmware upgrade file from the website.
2. Click the Browse... button and chose the firmware upgrade file.
3. Click the Upgrade button and wait until the upgrade is finished.

Note:

Upgrading firmware may take a few minutes.

Do not turn off the power or press the reset button!

After flashing, reset to: If you want to reset the router to the default settings for the firmware version you are upgrading to, click the Firmware Defaults option.

3.3.9.6 Backup

Backup Configuration

Backup Settings
Click the "Backup" button to download the configuration backup file to your computer.

Restore Configuration

Restore Settings
Please select a file to restore

WARNING
Only upload files backed up using this firmware and from the same model of router.
Do not upload any files that were not created by this interface!

Backup Settings: You may backup your current configuration in case you need to reset the router back to its factory default settings. Click the Backup button to backup your current configuration.

Restore Settings: Click the Browse... button to browse for a configuration file that is currently saved on your PC. Click the Restore button to overwrite all current configurations with the ones in the configuration file.

Note:

Only restore configurations with files backed up using the same firmware and the same model of router.

3.3.10.4 LAN

LAN Status

MAC Address	00:0C:43:30:52:77
IP Address	192.168.1.1
Subnet Mask	255.255.255.0
Gateway	0.0.0.0
Local DNS	0.0.0.0

MAC Address: MAC Address of the LAN port ethernet

IP Address: IP Address of the LAN port

Subnet Mask: Subnet Mask of the LAN port

Gateway: Gateway of the LAN port

Local DNS: DNS of the LAN port

Active Clients

Host Name	IP Address	MAC Address	Conn. Count	Ratio [4096]
*	192.168.1.120	10:78:D2:98:C9:46	57	1%

Host Name: host name of LAN client

IP Address: IP address of the client

MAC Address: MAC address of the client

Conn. Count: connection count caused by the client

Ratio: the ratio of 4096 connection

Dynamic Host Configuration Protocol

DHCP Status

DHCP Server	Enabled
DHCP Daemon	uDHCPd
Start IP Address	192.168.1.100
End IP Address	192.168.1.149
Client Lease Time	1440 minutes

DHCP Server: enable or disable the router work as a DHCP server

DHCP Daemon: the agreement allocated using DHCP including DNSMasq and uDHCPd

Starting IP Address: the starting IP Address of the DHCP server's Address pool

Ending IP Address: the ending IP Address of the DHCP server's Address pool

Client Lease Time: the lease time of DHCP client

DHCP Clients

Host Name	IP Address	MAC Address	Client Lease Time	Delete
PC-201011161332	192.168.1.142	00:21:5C:33:4D:29	1 day 00:00:00	
jack-lincw	192.168.1.117	44:37:E6:3F:45:54	1 day 00:00:00	
*	192.168.1.149	00:0C:E7:00:00:00	1 day 00:00:00	

Host Name: host name of LAN client

IP Address: IP address of the client

MAC Address: MAC address of the client

Expires: the expiry the client rents the IP address

Delete: click to delete DHCP client

Connected PPPOE Clients

Interface	User Name	Local IP	Delete
ppp0	hometest	192.168.10.10	

Interface: the interface assigned by dial-up system

User Name: user name of PPPoE client

Local IP: IP address assigned by PPPoE client

Delete: click to delete PPPoE client

Connected L2TP Server

Interface	Local IP	Remote IP	Delete
ppp0	172.168.8.2	172.168.8.1	

Interface: the interface assigned by dial-up system

Local IP: tunnel IP address of local L2TP

Remote IP: tunnel IP address of L2TP server

Delete: click to disconnect L2TP

Connected L2TP Clients

Interface	User Name	Local IP	Remote IP	Delete
ppp1	hometest	192.168.50.2	120.42.46.98	

Interface: the interface assigned by dial-up system

User Name: user name of the client

Local IP: tunnel IP address of L2TP client

Remote IP: IP address of L2TP client

Delete: click to delete L2TP client

Connected PPTP Server

Interface	Local IP	Remote IP	Delete
ppp0	172.168.8.2	172.168.8.1	

Interface: the interface assigned by dial-up system

Local IP: tunnel IP address of local PPTP

Remote IP: tunnel IP address of PPTP server

Delete: click to disconnect PPTP

Connected PPTP Clients

Interface	User Name	Local IP	Remote IP	Delete
ppp1	hometest	192.168.5.1	120.42.46.98	

Interface: the interface assigned by dial-up system

User Name: user name of the client

Local IP: tunnel IP address of PPTP client

Remote IP: IP address of PPTP client

Delete: click to delete PPTP client

3.3.10.6 Sys-Info

Router

Router Name	Router
Router Model	Four-Faith Router
LAN MAC	<u>00:0C:43:72:54:02</u>
WAN MAC	<u>00:0C:43:72:54:03</u>
WAN IP	10.37.53.74
BKUP WAN IP	0.0.0.0
LAN IP	192.168.1.1

Router Name: the name of the router

Router Model: the model of the router

LAN MAC: MAC address of LAN port

WAN MAC: MAC address of WAN port

WAN IP: IP address of Main WAN port

BKUP WAN IP: IP address of bkup WAN port

LAN IP: IP address of LAN port

Services

DHCP Server	Enabled
ff-radauth	Disabled
USB Support	Disabled

DHCP Server: enabled or disabled

ff-radauth: enabled or disabled

USB Support: enabled or disabled

Memory

Total Available	28.2 MB / 32.0 MB
Free	11.2 MB / 28.2 MB
Used	17.0 MB / 28.2 MB
Buffers	1.8 MB / 17.0 MB
Cached	6.3 MB / 17.0 MB
Active	1.5 MB / 17.0 MB
Inactive	0.8 MB / 17.0 MB

Total Available: the room for total available of RAM (that is physical memory minus some reserve and the kernel of binary code bytes)

Xiamen Four-Faith Communication Technology Co.,Ltd.

Add: J1-J3,3rdFloor,No.44,GuanRiRoad,SoftWare Park,XiaMen .361008.China

http: //www.fourfaith.com Tel: +86 592-6300326 6300325 6300324 Fax: +86 592-5912735

Free: free memory, the router will reboot if the memory is less than 500kB

Used: used memory, total available memory minus free memory

Buffers: used memory for buffers, total available memory minus allocated memory

Cached: the memory used by high-speed cache memory

Active: Active use of buffer or cache memory page file size

Inactive: Not often used in a buffer or cache memory page file size

DHCP

DHCP Clients

Host Name	IP Address	MAC Address	Expires
*	192.168.1.143	xx:xx:xx:xx:DD:45	1 day 00:00:00
four-488e1df5fa	192.168.1.125	xx:xx:xx:xx:D8:F7	1 day 00:00:00
Mycenae-PC	192.168.1.116	xx:xx:xx:xx:5E:30	1 day 00:00:00

Host Name: host name of LAN client

IP Address: IP address of the client

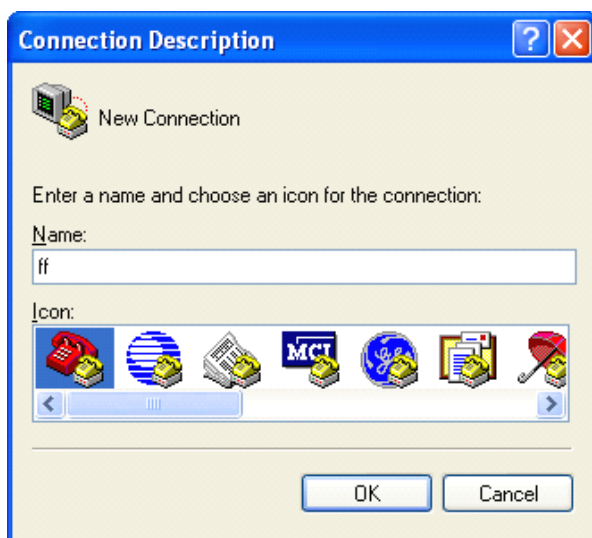

MAC Address: MAC address of the client

Expires: the expiry the client rents the IP address

Chapter 4 Appendix

The following steps describe how to setup Windows XP Hyper Terminal.

1. Press “Start”→”Programs”→”Accessories”→”Communications”→”Hyper Terminal”

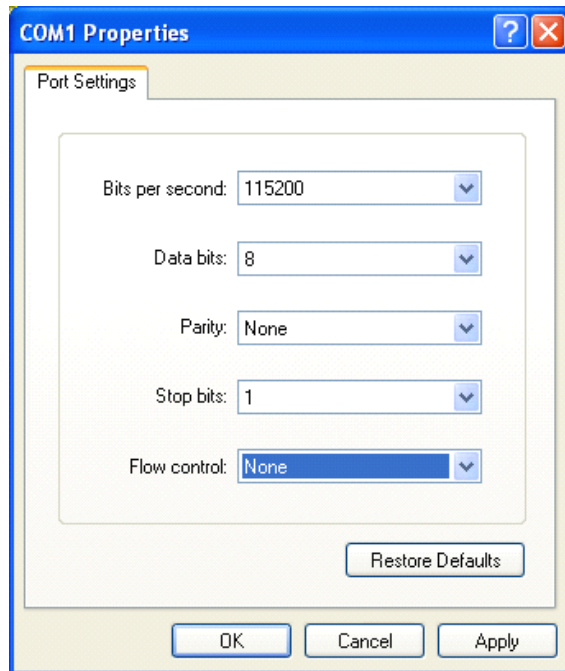

2. Input connection name, choose “OK”
3. Choose the correct COM port which connects to modem, choose “OK”

4. Configure the serial port parameters as following, choose “OK”

Bits per second: 115200

Data bits: 8
Parity: None
Stop bits: 1
Flow control: None

5. Complete Hyper Terminal operation, It runs as following
