

NPE X1000 Quick Start Guide

1. Connecting the Device

Checking device IP

Using iModCloud: log into iModCloud, click *Devices* in the Menu on the left side.

- Select your device and check *ETH IP* in the *Ethernet* box. 

Using SearchNPE: use SearchNPE to detect iMod/NPE devices on the network and to determine IP address.

- Find the application at http://www.a2s.pl/products/npe/SearchNPE_PZA2S.zip 

*

Internet connection via Ethernet port required

Internet connection via Ethernet port not required

2. Registering in iModCloud

In order to register NPE X1000 in iModCloud make sure your device is connected to the Internet via Ethernet port described in section 1. If your device is not connected, go to *SSH Connection*.

- **Type `demo.imodcloud.com` in your web browser**

- **Register your device**

You will find Serial number and Device password on the label (check the right side of the device)

- **Activate your account:** click the *Activate the account* button to view a form. After completing the form you will receive an email with activation link.

After registering the device and activating the account, you will see the following view:

It is possible to register your device offline. Status will change to online as soon as the Internet connection is established.

If you have any problems with logging to iModCloud, don't hesitate to contact us.

3. GPRS/3G Connection

- 1 In order to remove your SIM card from the tray insert the straight end of a paperclip or SIM eject tool into the hole next to the SIM port.

3G Connection

There are 2 ways to establish 3G connection:

With iModCloud:

1. Press GPRS CONFIGURE in order to configure GPRS connection.
2. Press GPRS CONNECT in order to establish GPRS connection.
3. Press GPRS DISCONNECT in order to disconnect.
4. In order to check connection status go to *Devices*, choose your device and click on the *GPRS* drop-down menu to view *GPRS STATUS*.

After clicking an action button a notification will appear.

With SSH Console:

1. Type *gsmconfigure* in order to setup modem.
2. Type *gsmconnect* into the terminal in order to establish 3G connection.
3. Type *gsmdisconnect* into the terminal in order to disconnect.
4. Use the *gsmstatus* command to check connection status.

```
GSM Connection Utility - command gsmstatus
STATUS: CONNECTED
MODEM_INFO: Dell Wireless 5540
```
