

iModCloud

MANAGE, CONFIGURE, SHARE IN ONE PLACE

iModCloud enables you to manage groups of iMod/NPE devices like it was a single one.

Enough with difficult and boring process of start-up and configuration.

VIEW ALL YOUR DEVICES VIA A MOBILE WEB BROWSER IN YOUR PHONE WITHOUT THE NEED TO BUY DEDICATED SIM CARDS.

NX Dynamics – create and run visualisations directly from iModCloud.

NX Dynamics modules enable you to control and view real-time data directly from a device. Now you can start your devices in iModCloud and access the whole network with one chart.

Quick and easy control from any place in the world

iModCloud has intuitive interface, designed for managing installation with a mobile device, this is why managing your resources has become even more comfortable.

Update software and download new versions of packages to any number of devices with just one click. Receive the latest solutions designed for your devices in a few seconds.

Modern internet service providing constant access to necessary information. Without the need to buy dedicated equipment or software – quick registration and easy configuration is all you need to manage all the iMod/NPE units in your project.

Share, configure, modify in an easy way – as never before.

With iModCloud you can easily manage the configuration of individual units or whole groups of iMod/NPE devices – each one will automatically receive the right part of configuration.

Security is guaranteed due to the use of SSL certificates and VPN encrypted communications. Total access control – share individual units and whole networks of devices according to your preferences. Create individual user accounts according to the requirements of a specified project.

Dedicated software – NX Dynamics – enables you to adjust visualisations for your project. You can get access to all your devices on one chart.

TECHBASE
WE MAKE CONNECTIONS. SIMPLE

iModCloud

MANAGE, CONFIGURE, SHARE IN ONE PLACE

With iModCloud you can:

- Register any iMod/NPE device into the iModCloud service.
- Install or upgrade firmware/software packages on many devices with a single click.
- Manage and configure services, like e.g. iMod configurations, from one place.
- Organize parts of installation (sets of devices) into separate VPN networks.
- Share devices or networks with newly created accounts.
- Run NX Dynamics interface on the device and NX Dynamics module on the cloud.

Functionalities being implemented:

iModCloud as a service for building one iMod configuration for a set of devices – each device receives a part of the configuration automatically.

iModCloud as a service for running your own visualization for sets of devices and connected hardware modules/sensors, using NX Dynamics or PHP templates.

iModCloud as a service for receiving and managing data about events and alerts from the iMod platform.

Main advantages of the service:

SECURITY: All connections are protected by industry standard SSL certificates using the VPN encrypted communications.

NO INSTALLATION: Service is ready to use, without any dedicated hardware or software.

FAST START: Just register your devices and build your installation.

EASY TO USE: Simple, user-friendly interface, built-in mobile layout.

AVAILABILITY: iModCloud is an internet service, not a limited device to device communication in the same VPN network.

SUPPORT: TechBase is committed to provide first class support for the iModCloud service.

FUTURE: New exciting functionalities are systematically added.
