Introduction

SUNIX IPC-E200X series, PCI Express serial communication boards, allows users to add or expand 2/4/8 RS-422/485 ports on Industrial PC-based system. The card is compatible with PCI Express 1.0a BUS specifications, allowing it to be installed in virtually any PC-based systems. SUNIX card has 64-bytes onboard FIFO buffer and compatible with 16C750 UART specification. SUNIX industrial serial cards used the most advanced chipset developed by SUNIX called MATRIX for high performance and reliable communication. These cards are single chip solution with built-in UART controllers. This industrial card series is designed with many of SUNIX advanced features and technologies, making it the best solution for industrial and mission critical applications.
